

WHEN CONTROL IS
CRITICAL

PROJECT PROFILE PHARMACEUTICAL INDUSTRY

Industrial Automated Systems was awarded a project at a major global pharmaceutical contract manufacturer. **IAS** was awarded the project because of their ability to offer a solution to meet the customer expectations that was competitive and within the time-frame mandated to ensure the project was successful.

The biggest challenge of the project was the target completion date. **IAS** worked around the clock to ensure the project was executed within the client's timeframe .

The project scope of work included implementing controls, panel build, and electrical installation and design for a total of four new packaging lines. **IAS** executed the electrical installation in a modular strategy so the equipment could be Factory Acceptance Tested (FAT) and Validated domestically then disassembled to be shipped in containers overseas. **IAS** traveled with the equipment and facilitated the installation at its final destination.

The following major components were incorporated into the project:

- 80+ Rockwell Automation PowerFlex Drives with EtherNet I/P Communications and Safe Off
- Rockwell Automation CompactLogix PLCs
- Rockwell Automation PanelView Plus 7
